

Electrical Safety for Every Age

MVEA offers several electrical safety programs to organizations and schools. Geared to any age group, they educate the audience on how to be safe around electricity and how electricity is generated and transmitted over electric lines. MVEA has a table top high voltage display in addition to a large display suitable for outdoor demonstrations.

Member service specialists have presented demonstrations to students from the Air Force Academy, area high schools, middle schools, elementary schools and various organizations. There is no fee for this service and the program can be tailor-made to your time schedule and needs.

For more information on this great educational opportunity, call either of our MVEA offices at 719-495-2283, 719-775-2861 or contact us on the web at www.mvea.coop.

MVEA has high voltage displays suitable for indoor or outdoor demonstrations.

Making Energy Education Fun!

MVEA has two areas on our website that provide children and teachers with games and resources for learning more about the energy that powers our homes, schools and businesses and how we can conserve that energy. On MVEA's website at www.mvea.coop, visitors can access both areas from the home page below the "Quick Links" menu by selecting **Kid's Korner** or **Kid's Zone**.

For more resources for teachers, contact Sarah Schaefer at 719-494-2670.
